Audible Prescription Reader

The Freedom of Voice

Did you know?

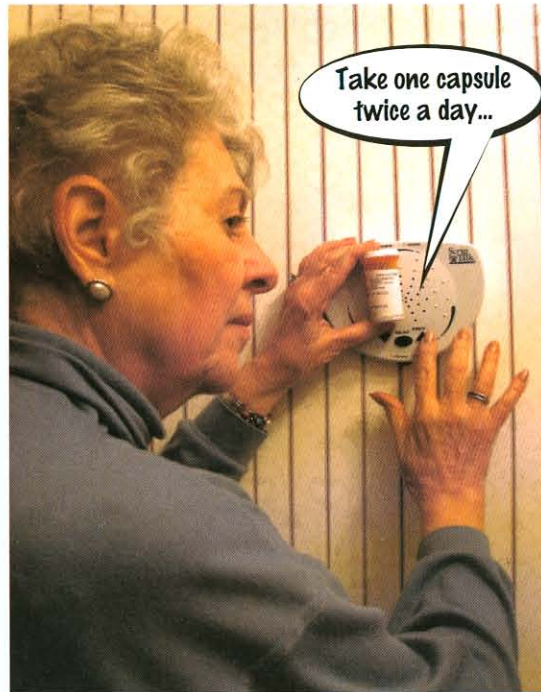

- As many as 1.9 million drug-related injuries occur each year due to prescription errors or adverse reactions.
- Nearly 10% of those injuries are life-threatening or fatal and more than half are preventable.
- Prescription drug mistakes are a leading cause of death and injury to seniors.
- More than half of all patients do not take medications as prescribed.

Do you have trouble reading your prescriptions?

- Are you worried that you don't remember your prescription instructions correctly?
- Are you bothered that you have to rely upon other family or friends to read your prescription information for you?
- Are you looking for a way to safely and independently manage your medications?

Now there is a solution!

ScripTalk Station®

Hear your prescription information!

- patient name
- drug name, dosage & instructions
- warnings & contraindications
- pharmacy information
- doctor name
- prescription number & date
- and more

ScripTalk Station® provides those who cannot read the information on their prescriptions a safe and easy way to manage their personal healthcare. Simply press a button and place the special Talking Label over the reader. A pleasant natural sounding voice speaks all the information printed on the label.

ScripTalk Station® uses RFID and text-to-speech technology. A thin antennae and microchip embedded within the label are programmed with all the printed information. Because the data is stored in the label itself, it can go on any size bottle, box, vial, tube or other prescription container.

Available in multiple languages:
